

## Panjin Rice

### 盘锦大米

Panjin rice is produced in Panjin City of Liaoning Province, located in the south of the Songliao Plain. The wetlands of coastal Panjin are traversed by rivers, and the terrain is flat with deep topsoil, making it the perfect place to produce excellent-quality eco-friendly-grown rice. The suitable temperature condition and long growth period ensure that the rice fully grows and develops, and the grown japonica rice has low amylose content, strong toughness and good taste.

The written record about the Panjin rice planting was started in 1907. Panjin has become the important national commodity grain base after more than 100 years history of traditional cultivation. The annual output of high quality rice is more than 1 million tons. The producer in Panjin created the crab-rice ecological planting model. Rice and crabs have a symbiotic relationship. This model avoids using fertilizers and pesticides so that the producers can make sure the quality of rice.

Moreover, Panjin Rice has high quality by using the modern low-temperature green grain storage technology to store rice and closed physical machinery clean processing technology to process the rice during the entire process.

盘锦大米产于辽宁省盘锦市，地处松辽平原南部，滨海湿地，河流纵横，地势平坦，土层深厚，为生产优质、生态稻米提供了得天独厚的自然条件。适宜的温度条件和较长的生长期确保水稻充分生长发育籽粒成熟，粳米直链淀粉含量低、韧性强、口感好。

盘锦水稻种植记载始于 1907 年，历经一百余年的发展，盘锦成为我国重要的商品粮基地，优质水稻年产量 100 多万吨，创设了蟹稻生态种植模式，通过大米和螃蟹的共生关系，减少使用化肥和农药，保证稻米的品质。

此外，大米加工企业通过采用现代低温绿色储粮技术储藏大米，利用封闭式物理机械清洁加工技术对大米进行全程加工，使得盘锦大米具有较高的品质。
